POST RADIESSE Treatment

- Apply an ice pack to the injection area after treatment to help reduce swelling. If swelling or redness persists too long, please contact our office.
- It is normal to feel a “firmness” in your injection area for the first few days after treatment. Over time, the area will soften, leaving you a soft, natural looking result.
- Most patients return to their normal routine/activities immediately. Check with Dr. Lahiri for her recommendation.
- Makeup may be applied shortly after treatment if no complications are present. Apply gently, avoiding strenuous rubbing of the injection site.
- The injection area may also be gently washed a few hours after treatment, avoiding aggressive scrubbing or rubbing.
- Sunbathing, or excessive UV exposure should be avoided until the redness or swelling have subsided.
- Immediately report and worsening or persistent symptoms or side effects to Dr. Lahiri.
